Knotty Girlz

Updating the Shop: Lisa's Guide

Add, change and remove products yourself, no code needed. Saves show up on the website in about 1–2 minutes, and every save is kept in a history, so anything can be undone.

1 Log in

1. Go to **knottygirlzboutique.com/admin** (bookmark it!).
2. Click **Sign In with GitHub**.
3. If GitHub asks, type your GitHub username and password. The very first time, also click the green **Authorize** button.
4. Click **Shop** on the left, then **Shop Products**.

Sign-in stuck?

- GitHub may have opened a small sign-in window **hiding behind your browser**. Look on your taskbar or dock, finish signing in there, and it closes by itself.
- **Firefox** says **"Invalid state key"**? Click the **shield icon** left of the address bar, turn **Enhanced Tracking Protection** off for this site, and try again. Or just use **Google Chrome**.

2 Your product list

Each product is a grey bar, with its photo, name and price just below:

- **›** (left end) **opens** the product so you can change it
- **=** (middle) **drag** to move it up or down. On a phone or tablet you'll see ↑ ↓ arrows instead
- **⋮** extra options, like **Duplicate** (copies it, handy for a similar product)
- **×** (right end) **removes** the product

Products show on the Shop page in the same order as this list. Works on a computer, tablet or phone.

3 Add a product

1. Click **+ Add Product** at the top of the list. A new, empty product opens at the top.
2. Fill it in:
   - **Product name**, e.g. *Pink Starfish Tote*
   - **Price**, exactly how customers should see it, e.g. *$20* or *$5 each*
   - **Category**: pick one from the list
   - **Photo**: click **Browse** and pick a picture. Square looks best. Big phone photos are fine (they're shrunk automatically).
   - **Photo description**: a few words, e.g. *Pink canvas tote with a white starfish*
   - **Description (optional)**: leave empty unless you want a line under the name
3. Click the blue **Save** button (top right).

4 Change a price

(or the name, photo or category)

1. Find the product. Tip: press **Ctrl+F** (**⌘+F** on a Mac) and type part of the name.
2. Click the **›** at the left end of its bar to open it.
3. Change the **Price** box.
4. Click the blue **Save** button.

5 Remove a product

1. Find the product.
2. Click the **×** at the **right end of its grey bar**.
3. A blue **"Item removed."** message appears. Wrong one? Click **Restore**.
4. Click the blue **Save** button.

Just sold out for now? Remove it and add it again later. The photo stays saved.

Nothing changes on the website until you click Save. After saving, wait 1–2 minutes and refresh the Shop page.
Stuck or made a mistake? Don't worry. Just text or call Jason. Everything can be undone.
